SUMMARY OF QUALIFICATIONS

- Proficient in developing responsive front-end interfaces using React and React Native, supported by a foundational understanding of backend technologies like Node.js and Fast API, and SQL/NoSQL databases.
- Skilled in managing real-time asynchronous data flow between hardware devices, applications, and databases by integrating RESTful APIs.
- Experienced in working with Agile/Scrum frameworks, using Jira for task management and Git for version control.
- Strong academic and practical experience in Deep Learning, Supervised/Unsupervised Learning, NLP, and agentic frameworks supported by both end-to-end ML projects, as well as LLM based solutions.
- Native-level fluency in English, Ukrainian, and Russian, allowing for effective collaboration with diverse teams and clients.

EDUCATION

Software Engineering Technology - AI

September 2023 – April 2026

Centennial College, Toronto, Ontario, Canada.

Relevant Courses Completed:

- Web Development (HTML, CSS, JavaScript, React.js, MongoDB)
- Supervised / Unsupervised / Reinforcement Learning
- Deep Learning
- Natural Language Processing
- Big Data / Cloud ML
- Advanced Database Concepts (SQL)
- Testing and QA
- Java / C# Programming
- Mobile Apps Development (Kotlin)
- Data Structures and Algorithms

Key Achievements:

- Cumulative GPA 4.44
- Across multiple terms I stepped up to lead 5 academic group projects involving teams of 5-7 members. I delegated tasks based on individual team member's strengths, established clear deadlines and communication, and ensured all deliverables met the quality criteria. Every project received a 90%+ grade

WORK HISTORY

Cross-Platform Front-end Engineer

October 2025 – January 2026

WIMTACH, Toronto, Ontario, Canada

Core Responsibilities:

- Developed a companion mobile app for a health device using React Native, translating Figma designs into responsive and adaptive interfaces.
- Developed and deployed an admin portal using React, providing the client with valuable user statistics.
- Integrated RESTful APIs using asynchronous programming to manage real-time data flow between the device, the application, and the database.
- Worked in a fast-paced Agile/Scrum team of 5, utilizing Jira and Git for task tracking, collaboration, and quality control.

TECHNICAL SKILLS

Front-end Development:	React, React Native, TypeScript, JavaScript, HTML5, CSS3, Responsive & Adaptive Design.
Back-end & APIs:	Node.js, Express.js, Python, Fast API, Flask, RESTful API, Asynchronous Programming.
AI & Data Science:	Deep Learning (TensorFlow), Machine Learning (Scikit-Learn), Data Analysis (Pandas, NumPy), Data Visualization (Matplotlib, Seaborn), Natural Language Processing, Agents (LangChain, LangGraph).
Databases:	SQL, MongoDB, Spark SQL
Tools & Methodology:	Git/GitHub, Jira, Agile/Scrum, Figma, MS Office, Google Suite, Slack.
Operating Systems:	Windows, Linux/Unix

CERTIFICATIONS

Meta Introduction to Front-End Development	February 2, 2023
Coursera Certificate	
Meta Programming with JavaScript	February 12, 2023
Coursera Certificate	
Meta Version Control	February 2, 2023
Coursera Certificate	
Meta HTML and CSS in depth	June 12, 2023
Coursera Certificate	

PROJECTS

-
- **SkyBooker** | [Link](#)
A responsive flight booking interface built with React, Node.js and Oracle DB.
 - **Pokedex** | [Link](#)
A responsive game interface that allows the user to catalogue, search and build teams of Pokémon. Built with React, Node.js, MongoDB and Google Auth.
 - **Lucky Shrub** | [Link](#)
A plant shop landing page built with pure HTML and CSS.
 - **NorthAuto** | [Link](#)
A transfer learning car image classifier built on top of InceptionV3 and trained on CompCars (140K+ images, 431 classes). Identifies make, model, year from car photos. Answers car questions in an RAG chatbot. Built with React, Python, TensorFlow, Fast API.
 - **ChronoLens** | [Link](#)
A transfer learning face gender, race and age estimator built on top of ResNet50 and trained on UTKFaces. Uses interesting techniques like age distribution encoding, weighed sampling and a hierarchical model pipeline (gender classifier -> gender specific age estimation). Built with React, Python, TensorFlow, Fast API.
